Basics on Electric Equipments

Degree competences to which the subject contributes

Specific:
CEMT-3. Assess the economic, social and environmental impact of the production, use and management of energy, with a holistic view of the life cycle of the different systems, and recognise and value the most remarkable developments in the fields of energy efficiency and the rational use of energy.

Teaching methodology
Slides-based lecturing. Invited lectures from the industry.
Some problems will be proposed as assignment.

Learning objectives of the subject
Knowing the basics of power system operation. Knowing the basic properties and components of the Smart Grid. Being able to apply novel techniques and technologies to the power system.
